Wastewater Treatment Systems

EnSo Ocean Wastewater Treatment Systems are available from single residential dwellings to bespoke solutions for larger commercial applications.

Our package design takes a modular approach using a number of physical and biological treatment stages in series to guarantee a high effluent quality.

## Ocean - Features and Benefits

- ◊ minimal aesthetic impact (noise, odour and visual)
- ◊ robust 'polyethylene' construction, the material of choice for off-mains drainage professionals
- ◊ low operation and maintenance costs
- ◊ proven treatment processes including submerged aerated filter (SAF) technology
- ◊ integral upward flow clarifier
- ◊ simple and flexible installation

## Services and Consultancy

- ◊ design and project management of schemes up to 2000pe
- ◊ complete package solutions including pump systems, tertiary treatment, UV disinfection, reed beds, etc.
- ◊ flow monitoring and sample analysis
- ◊ site assessment and refurbishment of existing wastewater treatment systems
- ◊ support with discharge consent applications and regulatory organisations, e.g. Environment Agency
- ◊ after sales service and maintenance contracts

## Contact us

EnSo is focused on delivering effective off-mains drainage solutions – please contact us to discuss your requirements.
